

Furniture Industry in the World

The furniture industry is influenced by furniture making styles from all over the world. From stylish Italian designs to traditional British furniture, wooden furniture today is a blend of furniture making styles from all over the world. The influence of global cultures is not just reflected in the style of furniture, but also in the various materials that are used for making wooden furniture. The same holds good for design concepts, the furniture industry is frequently combining furniture styles from different countries to create wooden furniture that is stylish, aesthetic and has a traditional look and feel to it. In essence, the furniture making industry has evolved into a multi-national enterprise.

Quality wooden furniture is highly sought after by people all over the world and wood is one of the few materials to retain its charm and appeal. The furniture industry has evolved to incorporate new age materials while making wooden furniture. Although, furniture is no longer restricted to traditional materials, wood is still the most popular material used for making furniture. Easy availability of wood from all over the world has made it possible to make traditional furniture using newer varieties of wood. The furniture industry has benefited greatly from easy availability of wood from different corners of the world.

Although teak is by and large considered the material of choice for making wooden furniture, what is interesting to note is new age materials like leather are now used to enhance the appeal of wooden furniture. Wooden furniture available today is a blend of more than one material; furniture makers prefer blending new age materials like leather, satin and linen to improve both the looks and the durability of wooden furniture. Bare wood furniture without any refinements is still popular for making dining sets and arm chairs. Perhaps the biggest application of bare wood is for making dining tables and study tables.
