

Outsourcing Doctor Scheduling Can Be Avoided

Outsourcing may not be in the future for those who know where to look. In today's environment, electronic medical records software is at the hub of keeping a vital up-to-date handle on the support of a practice when it comes to its billing. What was a way at making a sound financial choices for many small-staffed practices in the past may now see a reversal of direction because of the solutions offered by those who provide electronic medical records software. The reason? They provide a way to help regain what was lost through the mass amounts of paper work needed to process many of the insurance documents. An important feature in the choice for this type of product is that it is HIPAA compliant and able to support all specialties in all states while establishing accountability that keeps all those who handle the important documentation within the office.

Having an electronic medical records system that enables one to take advantage of integration with Microsoft Word is a plus as well as the capability of sending recall notices and mail outs becomes a possibility. With a multitude of private information to be viewed, a unique user name and password within the system is important and having every user time and date stamped for transactions such as appointment scheduling, charge entry, demographic entry goes a long way. Tracking is a key to accountability within the billing system of any electronic medical records software and to create end of day reports that can be run for a single user or combined users makes this possible. Another great characteristic of some systems is the ability to track the times when users log off and log on and to assign each user a specific security level.

Medical billing is a must to the continued support of every practice and having the daunting task of keeping the filings and insurance reporting in step with compliance is needed. For an electronic medical records system that supports primary, secondary, tertiary, automobile, worker's compensation insurance and DME claims as well as electronic filing of claims via internet is a benefit especially with the capability to verify eligibility on-line.

And when it comes to claims in medical billing a method for on-line correction of claims, workflow, reports and a way detect potentially faulty claim for edit prior to submission to insurance carrier will drastically increase office efficiency.

With a multitude of areas to deal with in the complex community of insurance products you can see why a software that supports primary, secondary, tertiary, automobile, worker's compensation insurance and DME claims is a plus and keeping on top of regulations for all 50 states when it comes to Medicare and Medicaid claims is a time saver.
